COURSE DESCRIPTION

Graduates in sustainable development have experience in fields including waste stream management, green procurement strategies, and eco-friendly manufacturing techniques. Since their work needs them to contact with a number of groups, including local government authorities or civic organisations, private individuals, and business employees, a professional in this industry must have interpersonal skills. Depending on their job profile, sustainability managers may have a variety of duties. They typically conduct analysis and monitoring in areas like recycling and the use of natural resources, inform the public about the significance of sustainability measures, and raise money for projects through rebate applications, projects, and proposals. Additionally, they provide promotional materials like pamphlets, websites, or online media to raise awareness of sustainability-related concerns.

One of the greatest concerns of our time, the climate crisis, is addressed through the Climate Futures Masters degree. Your ability to produce environmental policy solutions that will create a better future for the world will be enhanced by this comprehensive understanding of important viewpoints in science, society, and politics.

ABOUT US
